Computer Networking: A Top-Down Approach Featuring the Internet By James F. Kurose, Keith W. Ross, James Kurose, Keith Ross

The most up-to-date introduction to the field of computer networking, this book's top-down approach starts at the application layer and works down the protocol stack. It also uses the Internet as the main example of networks. This all creates a book relevant to those interested in networking today. By starting at the application-layer and working down the protocol stack, this book provides a relevant introduction of important concepts. Based on the rationale that once a reader understands the applications of networks they can understand the network services needed to support these applications, this book takes a "top-down" approach that exposes readers first to a concrete application and then draws into some of the deeper issues surrounding networking. This book focuses on the Internet as opposed to addressing it as one of many computer network technologies, further motivating the study of the material. This book is designed for programmers who need to learn the fundamentals of computer networking. It also has extensive material making it of great interest to networking professionals.

Editorial Review

From the Back Cover

The most up-to-date introduction to the field of computer networking, this book's top-down approach starts at the application layer and works down the protocol stack. It also uses the Internet as the main example of networks. This all creates a book relevant to those interested in networking today. By starting at the application-layer and working down the protocol stack, this book provides a relevant introduction of important concepts. Based on the rationale that once a reader understands the applications of networks they can understand the network services needed to support these applications, this book takes a "top-down" approach that exposes readers first to a concrete application and then draws into some of the deeper issues surrounding networking. This book focuses on the Internet as opposed to addressing it as one of many computer network technologies, further motivating the study of the material. This book is designed for programmers who need to learn the fundamentals of computer networking. It also has extensive material making it of great interest to networking professionals.

About the Author

Jim Kurose is currently a Professor of Computer Science at the University of Massachusetts. He is the eight-time recipient of the Outstanding Teacher Award from the National Technological University, the recipient of the Outstanding Teacher Award from the college of Natural Science and Mathematics at the University of Massachusetts, and the recipient of the 1996 Outstanding Teaching Award of the Northeast Association of Graduate Schools. He has been the recipient of a GE Fellowship, an IBM faculty Development Award, and a Lilly Teaching Fellowship.

Dr. Kurose is a former Editor-In-Chief of the IEEE Transactions on Communications and of the IEEE/ACM Transactions on Networking. He is active in the program committees for IEEE Informcom, ACM SIGCOMM, and ACM SIGMETRICS. He holds a Ph.D. in Computer Science from Columbia University.

Keith Ross is the Leonard Shustek Chaired Professor in the Computer Science Department at Polytechnic University. He has previously been a professor at both Euricom Institute in France and the University of Pennsylvania. In 1999, he co-founded the Internet startup Wimba.com.

Dr. Ross has published over 50 papers and written two books. He has served on editorial boards of five major journals, and has served on the program committees of major networking conferences, including IEEE Infocom and ACM SIGCOMM. He has supervised more than 10 Ph.D. theses. His research and teaching interests include multimedia networking, asynchronous learning, Web catching, streaming audio and video, and traffic modeling. He received his Ph.D. from the University of Michigan.

Users Review

From reader reviews:

Georgianna Menendez:

Book is to be different for every grade. Book for children until finally adult are different content. To be sure that book is very important for people. The book Computer Networking: A Top-Down Approach Featuring the Internet ended up being making you to know about other knowledge and of course you can take more information. It is very advantages for you. The book Computer Networking: A Top-Down Approach Featuring the Internet is not only giving you more new information but also to get your friend when you feel bored. You can spend your spend time to read your guide. Try to make relationship using the book Computer Networking: A Top-Down Approach Featuring the Internet. You never experience lose out for everything when you read some books.

Douglas Holmes:

Do you one among people who can't read enjoyable if the sentence chained from the straightway, hold on guys this kind of aren't like that. This Computer Networking: A Top-Down Approach Featuring the Internet book is readable by you who hate those straight word style. You will find the info here are arrange for enjoyable examining experience without leaving possibly decrease the knowledge that want to offer to you. The writer involving Computer Networking: A Top-Down Approach Featuring the Internet content conveys thinking easily to understand by many people. The printed and e-book are not different in the content but it just different by means of it. So , do you continue to thinking Computer Networking: A Top-Down Approach Featuring the Internet is not loveable to be your top collection reading book?

Hilda Dolan:

People live in this new day of lifestyle always make an effort to and must have the free time or they will get wide range of stress from both day to day life and work. So , whenever we ask do people have free time, we will say absolutely without a doubt. People is human not just a robot. Then we inquire again, what kind of activity do you possess when the spare time coming to a person of course your answer will certainly unlimited right. Then do you try this one, reading ebooks. It can be your alternative with spending your spare time, the book you have read is actually Computer Networking: A Top-Down Approach Featuring the Internet.

Jane Mansour:

Is it a person who having spare time in that case spend it whole day by simply watching television programs or just resting on the bed? Do you need something new? This Computer Networking: A Top-Down Approach Featuring the Internet can be the answer, oh how comes? A fresh book you know. You are and so out of date, spending your time by reading in this new era is common not a nerd activity. So what these ebooks have than the others?
