Statistical Treatment of Analytical Data By Zeev B. Alfassi

Statistical Treatment of Analytical Data provides a practical understanding of statistical treatment of data and how to apply it in actual day-to-day activities in the laboratory to improve the quality and reporting of analytical data. There are several statistical methods available for the interpretation of analytical chemical data that help to assess the quality of the analytical measurements and aid in the presentation and interpretation of the results. These methods are described in detail, with enough basic theory to allow the chemist to develop an understanding of the principles involved, but not so much that the theory obscures the essential practical points.

Editorial Review

Review

"What makes this book stand out is its introductory and fundamental character and its good working up from a didactic point of view with easily understandable examples from the fields of analytical chemistry. This enables the reader to understand the selected statistical and mathematical methods introduced."

"This book can be recommended to students and scientists who are interested in a brief introduction to selected statistical and mathematical methods for treatment of analytical data. It gives a good overview of the mathematical fundamentals of the methods presented. Simple examples from the practice of analytical chemistry substantiate the reader's understanding of what happens if chemometric methods are applied."

From the Back Cover

Statistical techniques have assumed an integral role in both the interpretation and quality assessment of analytical results. In this book the range of statistical methods available for such tasks are described in detail, with the advantages and disadvantages of each technique clarified by use of examples. With a focus on the essential practical application of these techniques the book also includes sufficient theory to facilitate understanding of the statistical principles involved.

Statistical Treatment of Analytical Data is written for professional analytical chemists in industry, government and research institutions who require a practical understanding of the application of statistics in day to day activities in the analytical laboratory. It is also for students who require further and detailed information that may not be available directly in a typical undergraduate course.
