### **Editorial Review**

#### **Review**

"...this new edition sustains the strenths of its predecessors while introducing new material, including (for the first time) exercises that enhance its usefulness as source material for lecture courses...all the expected standard topics are well covered, with a clarity that readily betrays the author's deep familiarity with, and understanding of, both the central physics and the empirical practice. Any atypical content and emphasis also reflects this first-hand command of the material, and sets the book apart from (and above) a number of others that attempt to cover broadly similar ground...accessible at undergraduate level, and with enough depth (and referencing to primary sources) to make it useful for the research scientist. Recommended to all with interests in these areas." - The Observatory, Ian D. Howarth

#### **About the Author**

David F. Gray is Director of the Elginfield Observatory and Professor of Astronomy at the University of Western Ontario, London, Canada.
