Mohamed Medhat Gaber "It is not my aim to surprise or shock you – but the simplest way I can summarise is to say that there are now in the world machines that think, that learn and that create. Moreover, their ability to do these things is going to increase rapidly until – in a visible future – the range of problems they can handle will be coextensive with the range to which the human mind has been applied" by Herbert A. Simon (1916-2001) 1Overview This book suits both graduate students and researchers with a focus on discovering knowledge from scienti c data. The use of computational power for data analysis and knowledge discovery in scienti c disciplines has found its roots with the re- lution of high-performance computing systems. Computational science in physics, chemistry, and biology represents the rst step towards automation of data analysis tasks. The rational behind the developmentof computationalscience in different - eas was automating mathematical operations performed in those areas. There was no attention paid to the scienti c discovery process. Automated Scienti c Disc- ery (ASD) [1–3] represents the second natural step. ASD attempted to automate the process of theory discovery supported by studies in philosophy of science and cognitive sciences. Although early research articles have shown great successes, the area has not evolved due to many reasons. The most important reason was the lack of interaction between scientists and the automating systems.

Editorial Review

From the Back Cover

With the evolution in data storage, large databases have stimulated researchers from many areas, especially machine learning and statistics, to adopt and develop new techniques for data analysis in different fields of science. In particular, there have been notable successes in the use of statistical, computational, and machine learning techniques to discover scientific knowledge in the fields of biology, chemistry, physics, and astronomy. With the recent advances in ontologies and knowledge representation, automated scientific discovery (ASD) has further, great prospects in the future.

The contributions in this book provide the reader with a complete view of the different tools used in the analysis of data for scientific discovery. Gaber has organized the presentation into four parts: Part I provides the reader with the necessary background in the disciplines on which scientific data mining and knowledge discovery are based. Part II details applications of computational methods used in geospatial, chemical, and bioinformatics applications. Part III is about data mining applications in geosciences, chemistry, and physics. Finally, in Part IV, future trends and directions for research are explained.

The book serves as a starting point for students and researchers interested in this multidisciplinary field. It offers both an overview of the state of the art and lists areas and open issues for future research and development.

Users Review

From reader reviews:

David Binkley:

As people who live in the actual modest era should be update about what going on or facts even knowledge to make these people keep up with the era which can be always change and progress. Some of you maybe will update themselves by studying books. It is a good choice for yourself but the problems coming to you actually is you don't know what one you should start with. This Scientific Data Mining and Knowledge Discovery: Principles and Foundations is our recommendation to cause you to keep up with the world. Why, because book serves what you want and want in this era.

Patrick Pierce:

You could spend your free time to learn this book this reserve. This Scientific Data Mining and Knowledge Discovery: Principles and Foundations is simple to bring you can read it in the playground, in the beach, train in addition to soon. If you did not include much space to bring the particular printed book, you can buy typically the e-book. It is make you simpler to read it. You can save the particular book in your smart phone. Thus there are a lot of benefits that you will get when you buy this book.

Anna Vinci:

Beside this particular Scientific Data Mining and Knowledge Discovery: Principles and Foundations in your phone, it could possibly give you a way to get nearer to the new knowledge or information. The information and the knowledge you are going to got here is fresh in the oven so don't become worry if you feel like an old people live in narrow town. It is good thing to have Scientific Data Mining and Knowledge Discovery: Principles and Foundations because this book offers to your account readable information. Do you often have book but you would not get what it's all about. Oh come on, that won't happen if you have this with your hand. The Enjoyable agreement here cannot be questionable, similar to treasuring beautiful island. So do you still want to miss it? Find this book along with read it from today!

Joseph Esparza:

What is your hobby? Have you heard this question when you got college students? We believe that that question was given by teacher to their students. Many kinds of hobby, All people has different hobby. So you know that little person including reading or as reading become their hobby. You need to understand that reading is very important and book as to be the factor. Book is important thing to incorporate you knowledge, except your current teacher or lecturer. You see good news or update with regards to something by book. Different categories of books that can you decide to try be your object. One of them is actually Scientific Data Mining and Knowledge Discovery: Principles and Foundations.
