Atlas of the World By Oxford University Press

When Oxford's *Atlas of the World* appeared last year, it was widely praised for the incredible beauty and accuracy of its maps and for its wealth of geographical information. *Booklist* hailed it as "one of the most current atlases available today" and singled out its "well-designed format and superior use of map colors." And John Noble Wilford, writing in *The New York Times Book Review*, called it a veritable encyclopedia of geographic information, underscoring its "greater variety of maps and the inclusion of so much noncartographic information" and adding that "those old staples of geography textbooks--fossil fuel reserves, steel production, literacy standings--never looked more inviting of further study." But world politics has been especially volatile in recent years, producing numerous changes to the face of the globe. To bring our *Atlas of the World* completely up to date, Oxford now announces a new Second Edition, with dozens of significant alterations to the maps of Europe, Africa, South America, and the Middle East. For instance, the *Atlas* now shows the Slovak Republic, the Czech Republic, Bosnia-Herzegovina, and Macedonia; it redraws the boundary between Saudi Arabia and Iraq; and it displays new administrative divisions in Nigeria. The new maps also reveal extensive updating of finer details such as the latest Trans-Amazonian highways, a new reservoir south of Bamako, Mali, and the Guri Reservoir in Venezuela. And the index has been completely revised to reflect all these changes.

Of course, the basic qualities of the *Atlas*--the exquisite mapmaking and the wealth of supplemental information--are as superb as ever. As in the original edition, readers will find hundreds of outstanding, full-color maps produced by Europe's finest cartographers, George Philip Ltd. The heart of the book is the 160-page section of large-scale world maps, providing detailed political and topographical information about every nation on Earth, enhanced by relief shading and layer-colored contours. There are also 66 city maps charting the key urban centers of each continent. The 75,000-entry index offers easy, convenient access to specific locations, with full geographical coordinates and a convenient number-letter access system. And the stunning 48-page Introduction to World Geography section--beautifully illustrated with lavish color maps, graphs, and diagrams--offers a systematic look at world geography, covering topics such as climate, the greenhouse effect, plate tectonics, agriculture, health, population and migration, international organizations, global conflicts, and much more.

Exquisitely designed, thoroughly updated, and packed with informative articles, graphs, and charts, Oxford's *Atlas of the World* offers the finest global coverage

available. It is the benchmark by which all other international map references will be measured.

The Solar System was formed about 5 billion years ago, when a spinning cloud of gas, mostly hydrogen but seeded with other heavier elements, condensed enough to ignite a nuclear reaction and create a star.

Sometimes called "The Crescent City," New Orleans is situated between the south bank of Lake Pontchartrain (the largest in this view) and the Mississippi River.

From Publishers Weekly

The latest revision of Oxford's highly acclaimed *Atlas of the World* is as up-to-date as can be in the post-September 11 world. "Site of former World Trade Center" says one caption on an updated map of lower Manhattan- and Baghdad has been added to the 67 maps of major cities around the world, including Moscow, Lisbon and Jerusalem. Statistics on the U.S. have been updated from the 2000 Census, and a new Gazetteer of Nations offers easy reference. But the heart, and strength, of this atlas remains the hundreds of colorful, beautifully detailed maps, conveying not only topographical features but also disputed boundaries, railways and principal roads. This is an indispensable reference for students as well as anyone interested in the state of the world, from population statistics to the environment and our impact on it. It will provide hours of happy, fascinating browsing.

From School Library Journal

Grade 6 Up-- A visually impressive debut in the field of updated atlases. An extensive introduction (47 pages) surveys "The Universe," "The Solar System," "The Earth," "People," "Production," and "Quality of Life" with charts, diagrams, and statistics on everything from constellations to deforestation. Next come 66 maps of the world's major cities. All are drawn to a scale of 1:200K, making relative size comparisons possible. A separate, comprehensive "Index to City Maps" provides quick access. Next, physical and political maps of each continent precede larger scale, more detailed maps of smaller areas. Scale size ranges from as large as 1:800K to as small as 1:64M. Over 100 single and double-page maps with full-color relief shading are complemented by an index of at least 65,000 entries. A closer look at the former Yugoslavia raises an important issue: Bosnia-Herzegovina is not listed or shown as an independent country although it is formally recognized as such by the United Nations. Also, boundary lines between and within nations are sometimes difficult to read and are often not as clear as those found in the *Hammond Atlas of the World* (1992), which is comparable in scope and content. Still, the overall high quality cannot be dismissed, making this an excellent additional choice for large public and school libraries. --Alicia Eames, Brooklyn Public Library
