### Editorial Review

#### From School Library Journal

Grade 3-6-- These attractive volumes offer much for report writers and browsers. Each begins with a brief overview of the discovery of the planet. With plenty of full-color and black-and-white photographs and paintings, the authors detail what we know, suspect, and hope to find out about Earth's close neighbor Venus and the mysterious ringed Saturn. Although these are called "First Books," they are by no means as elementary as the planet series from Children's Press. There is much technical information presented, especially in Venus as Schloss discusses land formations and the complex instruments that made this data available. Libraries owning books on planets written before the 1980s will want to update their collections with these titles, which cover the Pioneer and Magellan spacecraft missions. While not as distinguished as Franklyn Branley's *Saturn: The Spectacular Planet* (HarperCollins, 1987), both offer solid texts in enticing packages. --Denia Lewis Hester, Dewey School, Evanston, IL

#### From Library Journal

Grade 4-6-As scientists have recently discovered, it is not always necessary to send probes out into space to learn more about the solar system. Sometimes parts of the solar system come to us, with effects that range from pretty streaks in the night sky to the extinction of the dinosaurs. Though most meteorites have a cometary origin, in *Asteroids*, Bonar discusses the rocky debris that has taken up closer residence-not just between Mars and Jupiter but all over the inner system-debris that intersects Earth's orbit often enough to engender an international search and mapping effort (not to mention several disaster movies). Landau updates *Saturn* (Watts, 1991) with a report on observations gathered with the Hubble Space Telescope, plus a chapter on the construction and mission of the Cassini/Huygens probe, currently en route. Both surveys are profusely illustrated with color photos, attended by captions specifying computer manipulations and enhancements, and end with lists of books and Web sites. Bonar's book is flawed by oversimplifications ("Only 60 people have been struck by a meteorite in the last 3000 years." "The risk of dying from an asteroid impact is about the same as the risk of dying from a hurricane, tornado, earthquake, or flood") and so makes a weak alternative to Seymour Simon's *Comets, Meteors and Asteroids* (Morrow, 1998); Landau's title is a surer bet, taking Larry Brimner's *Saturn* (Children's, 1999) to a higher level of detail.

#### About the Author

Elaine Landau is the author of several nonfiction books for children.

### Users Review

#### From reader reviews:

##### **Evan Hinson:**

This *Saturn* (True Books: Space) book is just not ordinary book, you have it then the world is in your hands. The benefit you receive by reading this book is information inside this e-book incredible fresh, you will get facts which is getting deeper you read a lot of information you will get. This particular *Saturn* (True Books: Space) without we comprehend teach the one who studying it become critical in contemplating and analyzing. Don't possibly be worry *Saturn* (True Books: Space) can bring whenever you are and not make

your handbag space or bookshelves' come to be full because you can have it inside your lovely laptop even cellphone. This Saturn (True Books: Space) having excellent arrangement in word as well as layout, so you will not experience uninterested in reading.

#### **Mark Copeland:**

People live in this new morning of lifestyle always try and and must have the spare time or they will get wide range of stress from both everyday life and work. So , if we ask do people have time, we will say absolutely indeed. People is human not only a robot. Then we ask again, what kind of activity have you got when the spare time coming to anyone of course your answer may unlimited right. Then do you try this one, reading textbooks. It can be your alternative within spending your spare time, the actual book you have read is actually Saturn (True Books: Space).

#### **Charles Bax:**

Reading a book to become new life style in this season; every people loves to examine a book. When you read a book you can get a great deal of benefit. When you read textbooks, you can improve your knowledge, due to the fact book has a lot of information in it. The information that you will get depend on what sorts of book that you have read. In order to get information about your study, you can read education books, but if you want to entertain yourself look for a fiction books, these kinds of us novel, comics, along with soon. The Saturn (True Books: Space) will give you new experience in looking at a book.

#### **Albert Fragoso:**

A lot of people said that they feel bored stiff when they reading a reserve. They are directly felt the item when they get a half parts of the book. You can choose the actual book Saturn (True Books: Space) to make your personal reading is interesting. Your personal skill of reading skill is developing when you similar to reading. Try to choose basic book to make you enjoy you just read it and mingle the sensation about book and examining especially. It is to be very first opinion for you to like to open up a book and learn it. Beside that the e-book Saturn (True Books: Space) can to be your brand-new friend when you're really feel alone and confuse in doing what must you're doing of their time.
