## The Peril and Promise of Medical Technology (New International Studies in Applied Ethics) By D. Gareth Jones

Medical technology is one of the most powerful forces in the modern world, with enormous opportunities for good. For many in affluent countries, the expectations of what constitutes the good life have been transformed, as neonatal mortality rates have declined, life expectancy has increased, and one disease after another has been defeated. However, it is not an unalloyed blessing, as social patterns have been transformed, family structures have been challenged, and ordinary people as well as health professionals and scientists confront novel ethical dilemmas.

Gareth Jones writes not only as a scientist and bioethicist but also as a Christian. His aim is to make sense of some of the myriad issues encountered in a world dominated by medical technology. These include manipulation at the earliest stages of embryonic human life, through to ageing and attempts at bringing about physical immortality. The perceived power of genes is critically examined, as are claims that morality can be enhanced using technology. The centrality of the brain for making us what we are is sympathetically examined, against the backdrop of the ongoing debate on dualism and physicalism. Acknowledging our ever-increasing dependence upon medical technology, the author explores ways in which we can live in hope rather than fear.

### Editorial Review

#### Review

«[...] this book is not aimed at the popular market, and it contains some material, especially in the area of neuroscience, which would be difficult for non-specialists to follow. However, the theological and ethical arguments are very clear, fair and balanced, and I thoroughly recommend it as an antidote to much of the simplistic Christian material in the field.» (Denise Cooper-Clarke, ZADOK Perspectives 123, 2014)

#### About the Author

D. Gareth Jones is a neuroscientist and bioethicist. He is an emeritus professor at the University of Otago, New Zealand, where he served as Professor of Anatomy and Head of the Anatomy Department (1983–2003), Deputy Vice-Chancellor (Academic and International) (2004–2009) and Director of the Bioethics Centre (2010–2012). Recent books include *Designers of the Future*, and *Speaking for the Dead: The Human Body in Biology and Medicine*. He is co-editor with R. John Elford of two previous volumes in the New International Studies in Applied Ethics series.

### Users Review

#### From reader reviews:

##### **Ida Shrout:**

What do you about book? It is not important to you? Or just adding material when you want something to explain what your own problem? How about your time? Or are you busy man? If you don't have spare time to accomplish others business, it is gives you the sense of being bored faster. And you have free time? What did you do? Every individual has many questions above. They have to answer that question due to the fact just their can do this. It said that about reserve. Book is familiar on every person. Yes, it is suitable. Because start from on jardín de infancia until university need this specific The Peril and Promise of Medical Technology (New International Studies in Applied Ethics) to read.

##### **Jennifer Witherspoon:**
