**China's Energy Strategy: The Impact on Beijing's Maritime Policies** From Brand: Naval Institute Press

A variety of viewpoints is offered in this timely analysis of China's economy and the future shape of Beijing's energy consumption. The authors, all noted authorities in the fields of economics, diplomacy, energy, and defense, consider an unprecedented range of influences and factors to avoid the limitations of looking at the subject myopically or with political bias. They conclude that while energy insecurity could eventually lead to an arms race at sea or even a naval conflict that neither side wants, there is ample room for Sino-American energy dialogue and cooperation in the maritime domain.

Comprehensive, diverse and essential for national security professionals a subject we must understand clearly for our Asia-Pacific future. -- **Admiral Thomas B. Fargo**, U.S. Navy (Ret.), former Commander, U.S. Pacific Command

*China's Energy Strategy* is a necessary read for anyone interested in the future of the People's Republic of China's energy development and its strategic implications for the U.S., with particular attention to maritime development in both countries. The book tackles the prospects for China's energy development in a remarkably comprehensive, nuanced fashion. It evaluates Chinese perspectives and prospects, analyzes the PRC's capabilities in each relevant global region, and dissects the PLA Navy's capabilities with respect to energy security issues. The authors, including those writing for the final section, which analyzes the implications for U.S. policy, carefully identify inevitable uncertainties and analytical disagreements. On balance, the book stresses the room for U.S.-China energy cooperation in the maritime domain. Importantly, it provides the rich array of data and analysis necessary for readers to develop their own deeply informed perspectives on this issue. -- **Dr. Kenneth Lieberthal**, Arthur F. Thurnau Professor of Political Science, University of Michigan and former Senior Director for Asia on the National Security Council

This book is a comprehensive assessment of China's overall and maritime energy security strategies; as important, it provides clear and detailed guides to judge the nature of future Chinese naval developments and overall Chinese security strategy. -- **Admiral Dennis Blair**, U.S. Navy (Ret.), former Commander, U.S. Pacific Command

From the Author

## **ADDITIONAL EVALUATIONS:**

"...it is a relief to read a mass of carefully considered common sense such as is contained in this fine book. It is refreshing to be reminded that so many of America's military, especially naval, intellectuals can be so clear headed and rational. ...Defence planners and warriors who are currently or likely to be involved in the Indo-Pacific regions should study this book very carefully."

### **--*Ships & Shipping* (July 2009): 38.**

"The importance of the energy factor in politics today can hardly be called into question. ... How much does... energy affect... military doctrine? How does the energy vulnerability of the state influence the modernization of the army? As far as China is concerned, these questions are answered at the beginning of the complex research by Gabriel Collins, Andrew Erickson, Lyle Goldstein, and William Murray.... This approach makes the book... exciting reading and gives a lot of food for thought and discussion. The authors are fellows of the U.S. Naval [War] College and are famous for their studies on various aspects of China's energy strategy, including its impact on [the] maritime strategy of the country."

### **--Yevgeny Petelin, "Energy at the Edge of War and Peace," *Security Index* 87.15 (Spring 2009): 147-49.**

"a book that analyses the consequences of China drawing upon much of the world's remaining oil reserves for its exclusive use is bound to raise the interest of the reader.... 20 renowned (U.S.) experts in the fields of economics, energy, sinology, and naval strategy analyse Chinese reactions to what they perceive to the 'Malacca Dilemma,' this book fascinates its reader ... it is this mix expressed that makes the value of the book. It does not 'con the reader into a conclusion,' and knowing the Naval War College and the Naval Institute Press they do not attempt to do so. ... readers and analysts should assess the diverse views expressed in the studies to come to personal conclusions... There are so many highly interesting topics discussed in the studies (which cannot all be listed even by headline only in this review...), that I can only recommend reading this book."

### **--Wolfgang Legien, Editor-in-Chief, Naval Forces; former Director of Politico-Military Affairs, Supreme Allied Commander Atlantic, *Naval Forces: The International Forum for Maritime Power* 29.4 (April 2008): 146.**

#### **From the Inside Flap**

China's rapid growth has prompted Beijing to undertake an aggressive search for resources on a truly global scale. The resource most directly tied to continued growth in China is energy. Rising consumer appetites in China, coupled with occasional rolling blackouts due to spiraling demand in Chinese cities, have prompted intense anxieties in China concerning energy security. Since 80 percent of Chinese fossil fuel imports pass by ship through the Malacca Strait, an important component of Beijing's concerns have come to be known in China as the "Malacca Dilemma." This book draws on America's finest experts in the fields of economics, energy, China studies, and naval strategy in order to explore China's "Malacca Dilemma" and its implications for global maritime security.

The essays in this volume draw from a wide variety of viewpoints, but a central theme of the analyses is that the United States needs to be concerned that China is drawing upon much of the world's remaining oil reserves for its exclusive use. The resulting competition for this diminishing resource could lead to energy insecurity and may support other tendencies toward rivalry that in turn could foster a naval arms race neither side seeks. One of the major conclusions of this study is that there is, in fact, ample room for Sino-American energy dialogue and cooperation in the maritime domain and that the competition for limited energy sources like oil need not lead to conflict.

The book's authors are all authorities in their fields; many of the contributors are frequent advisers to major oil, shipping, and other multinational corporations, as well as governments. As a result, this volume takes into account an unprecedented range of influences and factors befitting such an important and complicated

topic.

This is the second book in the series "Studies in Chinese Maritime Development" published jointly by the China Maritime Studies Institute and the Naval Institute Press.
